THE SOLUTION FOR MUNICIPAL WASTE MANAGEMENT.

About tegos GmbH Dortmund

tegos was founded in Dortmund in 1996 and has become an internationally leading developer of integrated business software for the recycling and waste management industry. The company's industry specific solutions are based on Microsoft Dynamics NAV and are successfully used in all sectors of the waste industry worldwide. The international partner network of tegos currently serves about 400 companies in Europe, North America and Australia.

About enwis)

enwis) is the industry specific business software for the recycling and waste management industry developed by tegos and was the first solution worldwide which gained the title "Certified for Microsoft Dynamics NAV", confirming its high quality and customer satisfaction. enwis) is the only completely integrated solution on the market for the recycling and waste management industry and covers all business processes within the standard application. Furthermore, the cooperation with Microsoft provides the best possible protection of the customer's investments.

THE SOLUTION FOR MUNICIPAL WASTE MANAGEMENT.

enwis)public

The processes of the municipal waste management industry differ significantly from work processes in private waste management business. With enwis)public we have developed a solution which contains the operative functionalities of our industry solution enwis) and the applications from Microsoft Dynamics Nav; and combined, provides all important functionalities needed for municipal waste management.

Highlights

- Real estate management with history for owners, property managers and users
- Representation of streets and street sections
- Management of bins and change service
- Notification of fees
- Municipal tour calendar
- Collection on call and single orders
- Substance flow management
- Weighbridge integration
- Management of recycling centers
- Fleet Management
- Risk management
- Complaint management
- Complete integration with all Microsoft Dynamics NAV functionalities:
Financial accounting, assets accounting, cost accounting etc.

THE SOLUTION FOR MUNICIPAL WASTE MANAGEMENT.

Informative.

enwis)public enables you to manage all municipal data extensively and in an efficient way. To every real estate, information like dustbins, bin location variations, full or limited service, number of residents, payment numbers and fee debtors are stored, whereas all changes are documented in a history. Furthermore, the waste collection fees can be split easily with **enwis)**public and allocated to several fee debtors, like property owners, property managers or tenants.

Helpful.

enwis)public supports you in managing all types of bins in the streets or street sections of your waste collection area. For instance, the whole bin change service can be organized by means of the software, from the registration of change request to reposition. Moreover, **enwis)**public calculates important information like waste quantities per user, real estate, street or waste collection area, based on predefined container volumes and in consideration of compression parameters and levels of utilization. In addition, materials for each tour can be traced back at any time.

THE SOLUTION FOR MUNICIPAL WASTE MANAGEMENT.

Versatile.

Beside periodical tours for collecting residential waste, individual orders can also be organized with **enwis)public**. All single orders like the provision of bins or collections on request, for example of bulky waste, green waste or white goods, can be entered fast and organized with the system. For periodical tour planning, collection cycles can be defined for waste collections in **enwis)public**. On this basis, the system creates a municipal tour calendar for the whole year which also takes holidays into account.

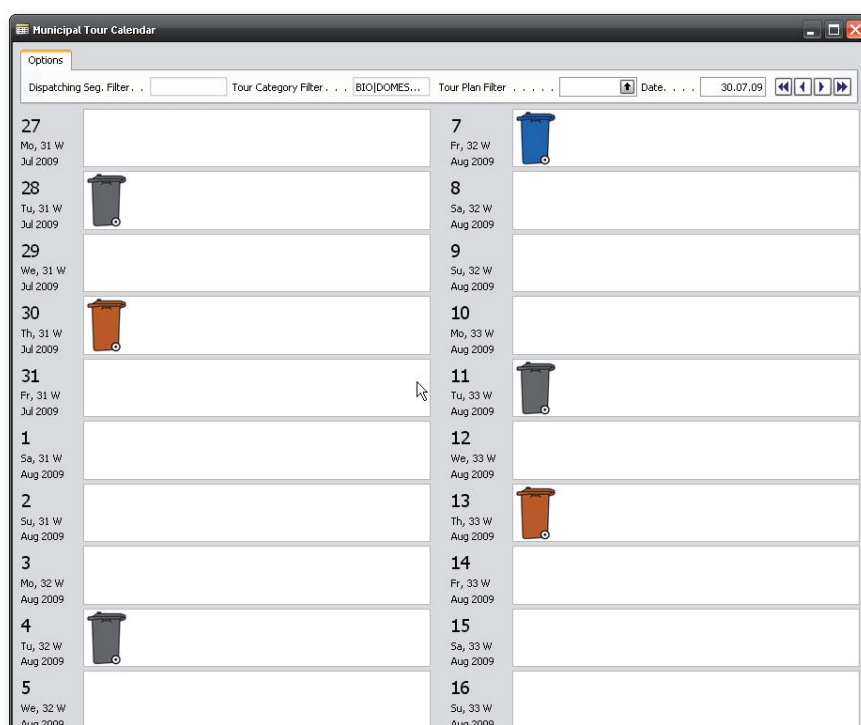

Figure: Tour Calendar in enwis)public

Complete.

Another important part of municipal waste management is the organization of recycling centers. All needed functionalities like weighbridge integration, cash payments, management of containers and hazardous waste movements are provided in standard **enwis)public**.

THE SOLUTION FOR MUNICIPAL WASTE MANAGEMENT.

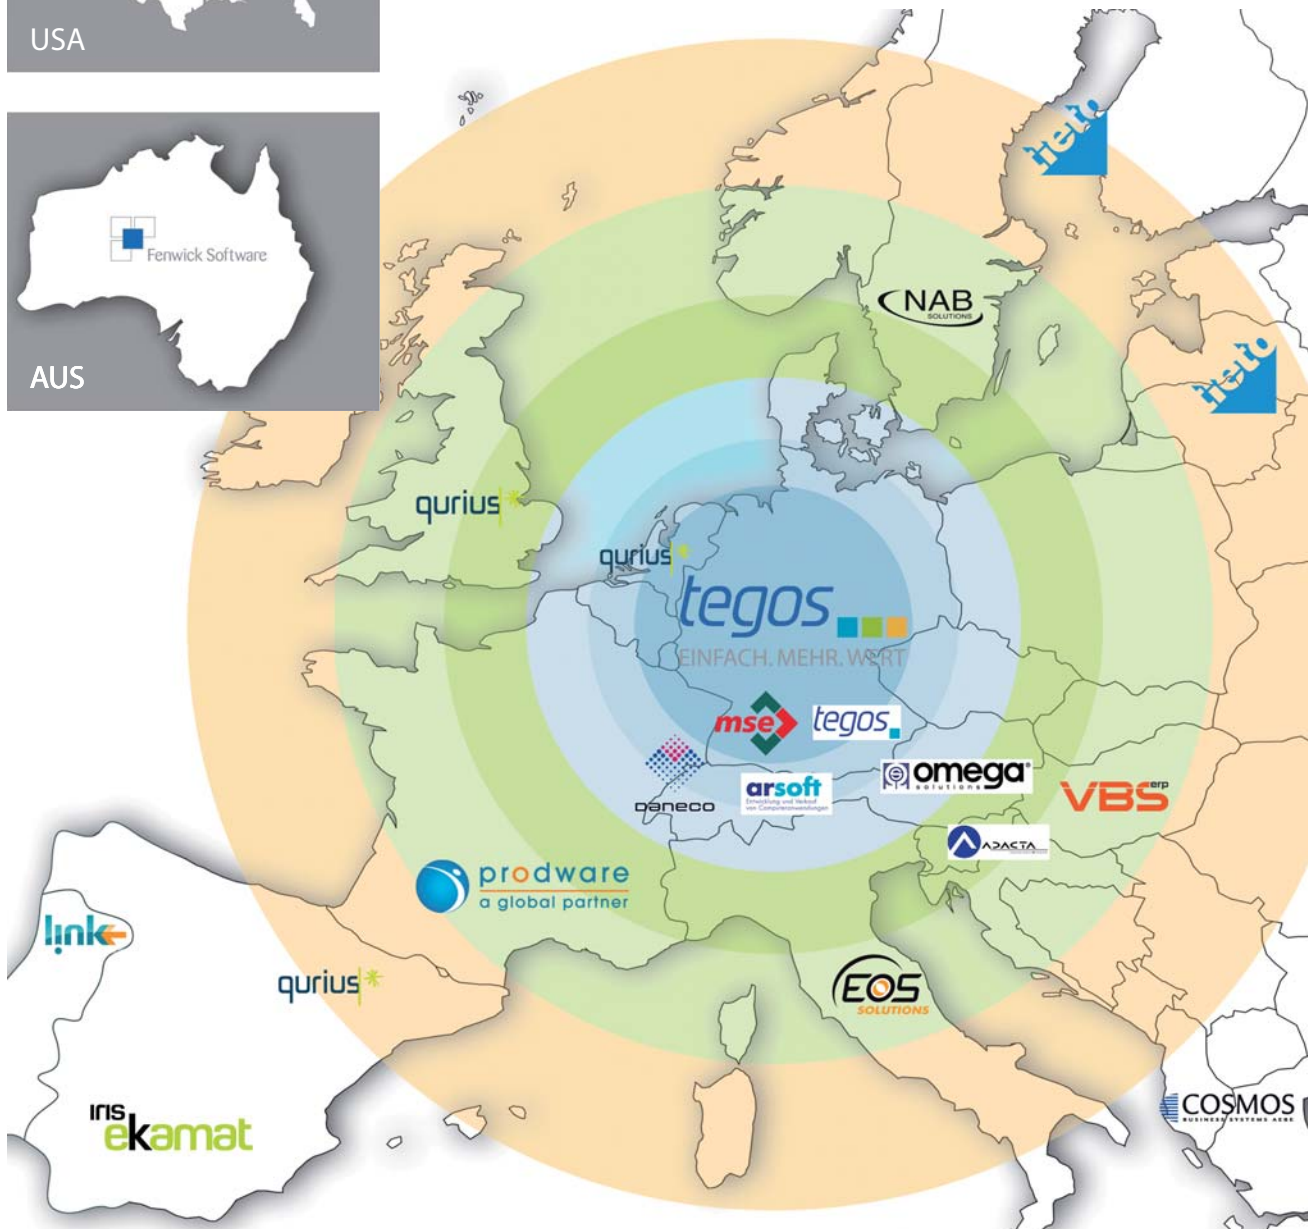

Anticipatory.

As is the case in private waste businesses, certain risk factors also exist in the municipal waste management industry which might affect the company in a negative way, such as occupational accidents, wear and tear of outdoor bins or vehicle damage. **enwis)**public contains functionalities for registering and evaluating these risk factors, providing a solid basis for targeted risk management.

Convincing.

Complaints – from property managers, owners or tenants as well as from your drivers – constitute a normal part of every day business in municipal waste management. In **enwis)**public, all information about extraordinary events, messages from drivers regarding dustbins that have not been presented etc. are registered automatically and a complaint history is created for customers and drivers. This enables you to react faster and to be better informed when you receive new complaints. The steps taken as resolution are also documented at this point.
