About tegos

The Company

Since 1998, tegos GmbH in Dortmund has established itself as one of the world's leading provider of complete IT solutions for the waste management and recycling industry.

Since 2011, tegos provides **comotor.**, a compact Software Solution tailored to the metal and commodities trading.

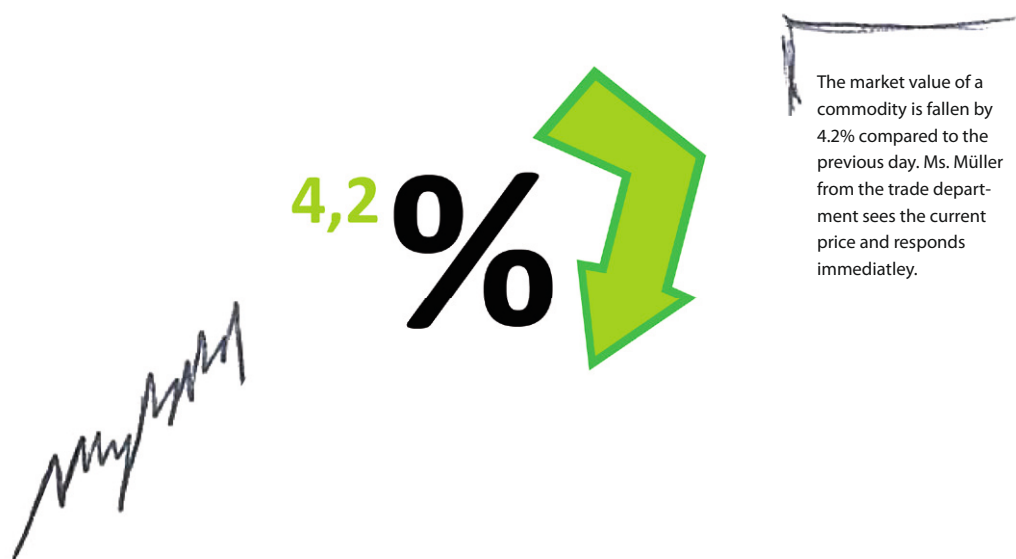

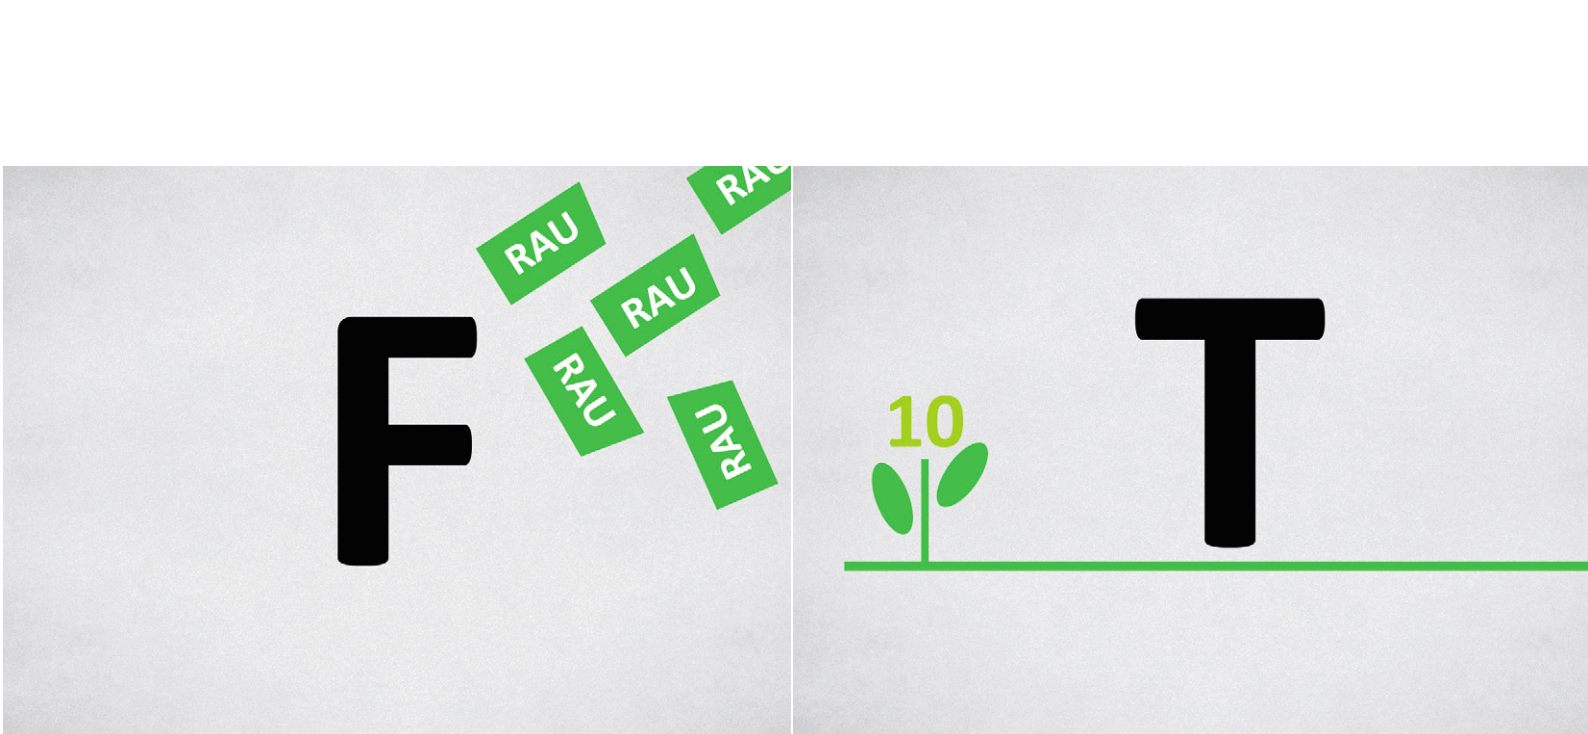

About comotor.

Our Efficiency

comotor. is the compact software solution by tegos that was specifically tailored to the requirements of the metal and commodity trading.

All areas from contract and order management to warehouse management and finance management are integrated into one system: **comotor.** A direct exchange connection included.

F

T

About comotor.

Your Advantages

- Overview of risks, volumes, prices and costs at any time
- Efficient due to a single data collection
- Valid data is available everywhere in the system
- Optimization of work processes
- Multilingual and multi-currency compatible
- Any number of clients
- Based on the latest version of Microsoft Dynamics NAV

Conclusion: Smart decisions can be made quickly.

Mrs. Förster from the sales department submits 50 new offers. The access to the database with over 50,000 contacts allows her an immediate processing.

Business Activities

Our Know-how – 1 Software

1.

2.

3.

4.

5.

6.

1. Exchange Connection

- **comotor.** records the entire exchange price
- Set up of any number of goods and currency exchanges
- Current rates affect the pricing in the contracts
- For each exchange **comotor.** will set up an exchange calendar
- The development of rates is always available in the system

2. Contract Management

- **comotor.** stores all important information in the contract management: contacts, customers, products and their exact material composition, quantities, prices, destinations, contract currency, etc.

3. Riskmanagement

- **comotor.** monitors the currency risk, price risk and credit limits, all in real time
- **comotor.** records the entire history of risk

4. Trade

- **comotor.** links inventory management, invoicing, order management, pricing and fixation, the stock market values and the contract management

5. Financial Management

- **comotor.** creates final invoices or credit notes
- accurate and prompt accounting due to a close association with the Financial Management

6. Enterprise Ressource Planning System

- **comotor.** allows the implementation of any number of own warehouses, contract warehouses and transit warehouses
- Easy and intuitional overview, also of warehouses with many positions
- Transfer of quantities between warehouses
- Permanent status request is possible

Business Activities

Contract Management

The management and monitoring of physical contracts is part of the foundations of commodity trading.

- In **comotor**, different types of contracts such as fixed price-, fixing-, content-, supply contracts are registered completely.
- All information and text of the contract are managed, e.g. business partners, terms of delivery and payment.
- The contract shall specify the material to be supplied and its quality (composition and properties).
- **comotor** offers you a quick overview of current contracts and their status.
- Complex workflow around the contracts can be mapped including all relevant documents.

Conclusion:

In **comotor**, contracts can be recorded flexibly but accurately. This allows for accurate monitoring of contracts and serves as a basis for further processes.

Pricing | Price Setting

In commodities trading, a simple calculation of „amount x price = Invoice Amount“ is not enough.

- In **comotor**, fixed-price- and fixation-contracts are mapped. Different fixation conditions against different exchanges and courses can be used.
- More complex rules such as average fixation on „Lowest of the four“ are supported. The conditions can be expanded to meet your individual specific requirements.
- Price settings for several elements are possible
- In addition to premiums, prices/deductions in any currencies and units can be specified for particular elements.
- Escalators or escalator clauses allow the use of content-related deductions and surcharges or price levels.
- If you create a contract, **comotor** automatically saves the current market prices relevant for the contract. These reference prices allow an assessment of the business.

Ms. Müller from the trade department sees the current price and responds immediately. She thinks for a moment. How much should she order?

Quantity: 300 tons.

Conclusion:
comotor allows the mapping of all in commodity trading common price rules. Thus, all prices are calculated exactly by the software. Errors in calculating the price are a thing of the past!

Business Activities

Order Management

The operational business causes the major effort for many companies.

- With **comotor.**, deliveries can be easily planned and monitored
- In the consignments, the delivered material is documented: the quantity supplied, metal composition, deductions and properties
- Transport can be handled in different ways. Transport calculations can be created and deliveries can directly be assigned.
- All operating divisions can be shown in **comotor.**: incoming goods, laboratory, scales, warehouse.
- **comotor.** assists you with complaints, the material will be blocked and specific workflows can be initiated.
- Your third-party deals are managed and monitored by **comotor.**
- **comotor.** for example allows you to keep a long/short list.

Conclusion:

By the **comotor.** Order Management, all procedures can be controlled and monitored. It provides important and current information for the trading business.

Exchange Connection

By an exchange connection, any price and exchange rates can be provided in **comotor**.

- any number of exchanges to set up
- different prices per contract
- the entire forward curve can be disposed
- flexible data vendors

Conclusion:

The Exchange Connection is an important element, it provides necessary information on pricing and valuation.

Billing

The billing is adjacent to the processing of orders.

- Different types of invoices can be created: Pro-forma invoice, preliminary statement and final statement
- Even the most complex price calculations can be easily traced.
- The close link with the financial accounting ensures the correct and timely posting.

Conclusion:

In **comotor**, you have contracts, pricing, actual values from the operational business and an integrated financial accounting - billing is now a breeze.

The assessment of the stock is a key challenge for a company.

- For each storage location, a accurate cost price can be made. Purchase, fixing, cost, transportation and production affect the cost price.
- The current market value of all positions is directly available.
- The stock overview allows the precise overview of thousands of positions even for distributed storage.
- You can evaluate your stock positions as desired, you can sort, filter and group by product, storage location/space, batch origin (contract, partner), cost price, metal composition, etc.
- The tracking allows you to analyze the history of a batch, from the origin to use, even for mixtures or separations.
- Stock can be reserved, on request even automatically for sales or production

Conclusion:

The **comotor** storage module gives you the quick overview of your positions, even for re-locations, mixtures and separations.

Inventory Management

Risk Management

In commodity trading it is essential to have an eye on your own risk.
comotor. supports you at this:

- Monitoring of the currency risks, price risks and credit limits in real time
- Recording of the history of price risk
- Material is weighed at the arrival, your laboratory makes an analysis or an average price-fixing; everything automatically corrects your current risk.

The screenshot displays the Microsoft Dynamics NAV user interface. The main window shows the 'Role Center' for 'Metal at Risk' with a table of elements (AL, MO, NI) and their respective units and measures. Below this, there are sections for 'Activities', 'Contracts', 'Purchase', and 'Sales'. A 'Price Risk Overview' window is open, showing a detailed breakdown of risks for 'Long' and 'Short' positions. The 'Long' section includes a table with columns for 'Fixed', 'Unfixed', and 'At Risk', and rows for 'Contract', 'Order not Owned', 'Order Owned', 'Invoice', 'Credit Memo', 'Return Order', and 'Total'. The 'Short' section follows a similar structure. The 'Metal at risk' summary at the bottom shows a total value of 717,644 MT.

	Fixed	Unfixed	At Risk

Business Activities

Production, Blending, Separation

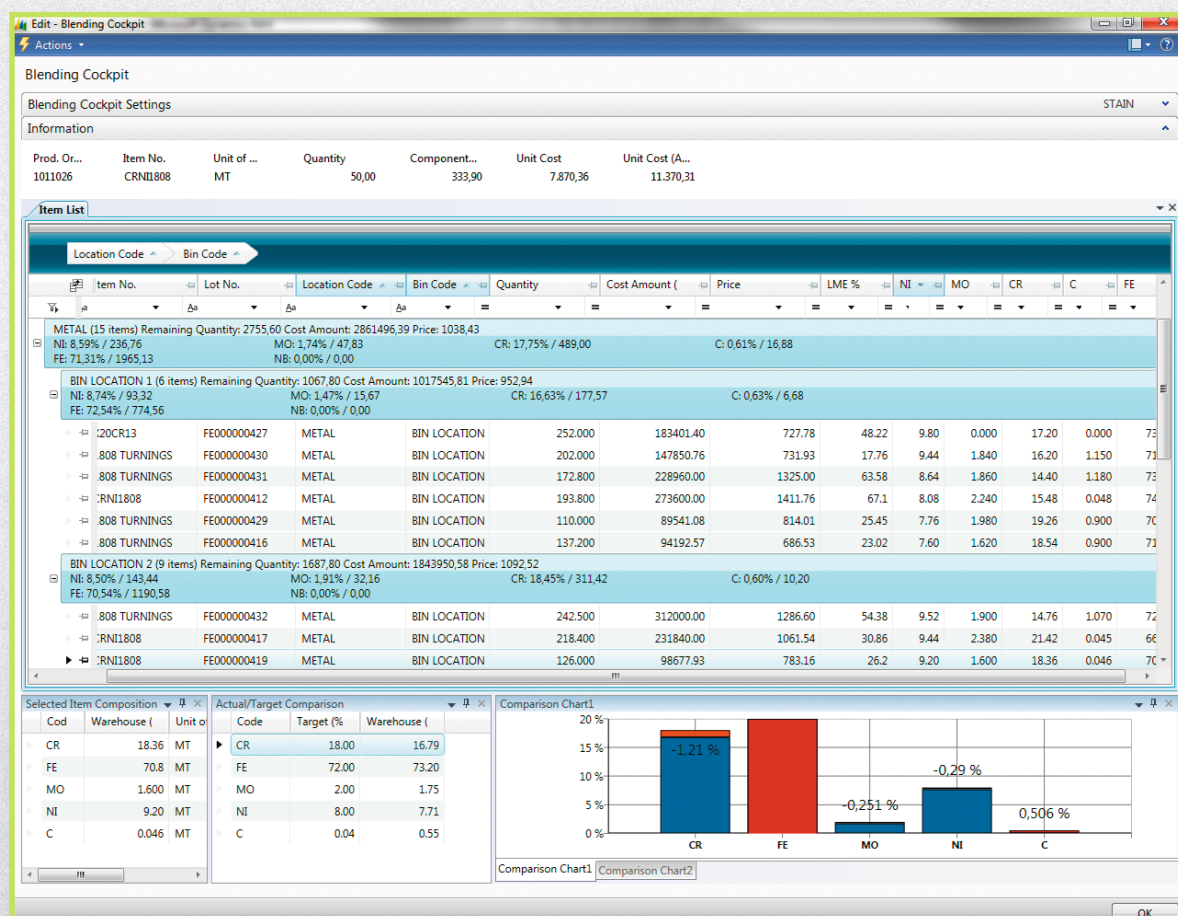

The **comotor** production module supports you in optimizing your production-, mixing- and separation processes.

- Operations can be planned, so for example you can act out different alternatives by paperblends.
- A blending cockpit helps you to meet quality requirements efficiently.
- You can capture machine and handling costs directly in the production and include them into the cost price.
- Personnel and equipment can be optimally utilized by the capacity planning.

Conclusion:

From the mixture to shredding to the multi-stage separation, all production processes can be planned, monitored and controlled in **comotor**.

User Interface:
Blending-Cockpit

International

Commodities trading is international. **comotor.** supports affiliated groups and medium-sized companies in this market.

- Any currencies and units can be used in **comotor.**
- Accounts, account receivables and accounts payable can be administered in any currency.
- Upon request, **comotor.** keeps each business in U.S. dollars additionally.
- **comotor.** is multi-lingual, the language can be changed directly.
- Documents can easily be printed in the language of the business partner.
- The consolidation module allows other accounts, such as U.S. GAAP, IFRS, IAS, or creating a different tax base.
- The Intercompany module allows for fast and smooth exchange of contracts, analysis, deliveries and invoices between different companies.

Conclusion:

You have business partners and subsidiaries on several continents? The collaboration gets easier with **comotor.** - apply one Software internationally!

Microsoft Dynamics NAV

- Millionfold used and proven technology from Microsoft.
- Our partner Microsoft stands for a high security of your investment.
- Due to the simple definition of roles, each employee has his **comotor.** user interface tailored to his needs. From the CEO to the retailer to the check weighman, everybody finds an optimized interfaced.

Conclusion:

There is no way around **comotor.!**
